

genuview

Access- and storage-management solution for genubox

Remote Maintenance

Easy management of video recordings

Audit-Optimized Video Archiving

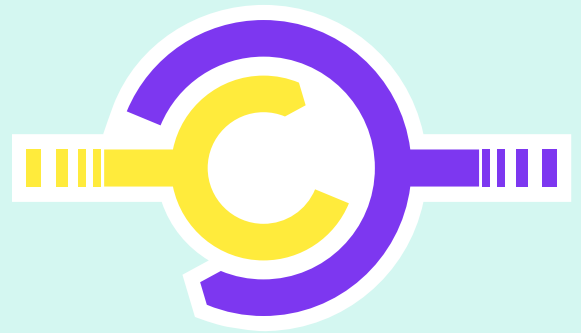

The remote maintenance solution from genua offers the possibility to record remote- and maintenance access by means of video and to archive the files. The audit-optimized documentation can be structured in a GDPR-compliant manner. The genuview access- and storage-management add-on expands this possibility:

- Following remote maintenance access, the video recording is transferred in raw format from the service box to a genuview server, where it is archived.
- Access to the recordings can be managed easily via a central rights management system.

As a tailor-made IT-security extension of the remote maintenance ecosystem, genuview allows large volumes of video material data to be handled with ease.

» A high volume of video recordings from remote accesses can quickly become confusing. genuview enables efficient management, ensures order and guarantees controlled access.

genua.

All Advantages at a Glance

Organized documentation of remote accesses for auditing purposes

Efficient user administration by means of a model for roles and rights

Access control by authentication via LDAP

Transcoding/archiving in MPG4/H.264 format

File-server integration via NFS and SAMBA

Software container as VMware image

Clearly-Arranged Storage Management

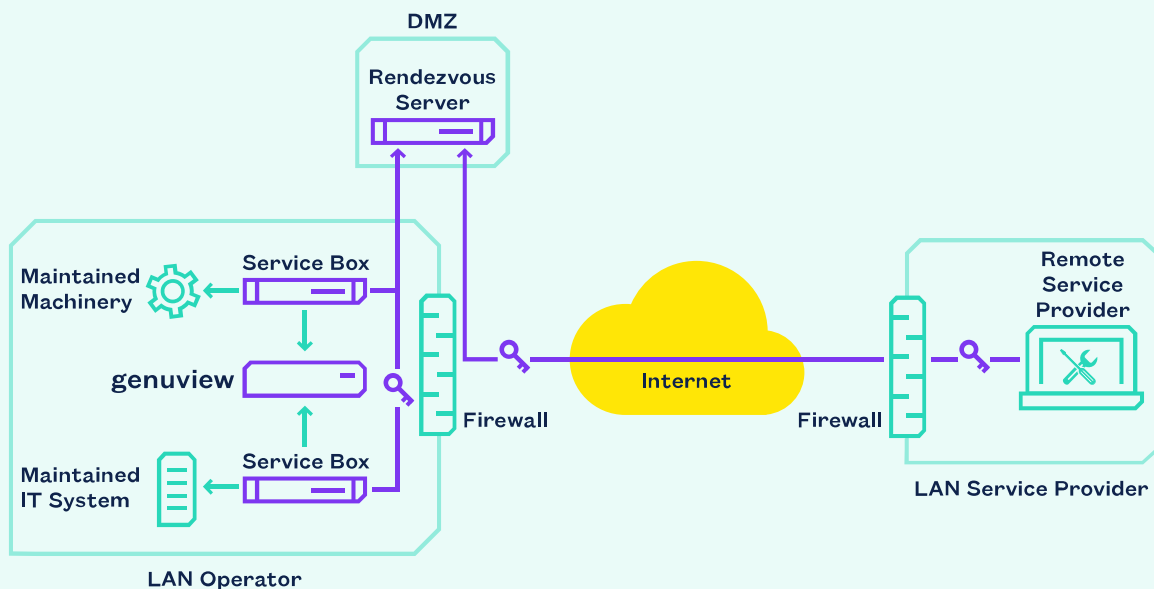

Users of the remote maintenance solution from genua can record remote sessions as video and archive them for documentation. It is thereby easily possible to retroactively determine who did what in the network and when.

genuview's user interface simplifies the overview, administration and archiving of the recordings. In addition, genuview can easily be scaled to handle large quantities of data and many permanent connections.

Architecture and Access Rights

The genuview access- and storage-management solution is connected directly to the remote maintenance solution. The service boxes on the target systems transfer the data of the video recordings to external genuview servers, e.g., on a customer server, where it is stored and archived.

External file servers can be integrated via NFS or SAMBA. The videos are transcoded in real time and archived in MPG4/H.264 format. The LDAP network protocol was integrated for the authentication of users.

Example showing integration of genuview into a remote-maintenance ecosystem

Reasons Why

- Experts for the IT security of companies and public organizations
- Offer of a comprehensive, modular IT security portfolio
- Quality without compromise for all products, services, and processes

genua – Excellence in Digital Security

genua develops innovative, reliable as well as market-shaping products and solutions. Whether in the public sector, for the operators of critical infrastructures, in industry or in the protection of classified information: we provide answers to the IT security challenges of today and of tomorrow.
