

Security Laptop vs-top

Mobile solution for secure remote access to government and company networks

Mobile Work

Providing high security access for users connecting to restricted networks

genua.

Maximum Security for Confidential Information

The Security Laptop vs-top connects employees who work from home or on the road to government networks and networks of companies with an obligation to maintain secrecy. Two separate work environments ensure maximum security for confidential information:

- One work environment uses standard software, meaning Windows or Linux applications.
- Confidential data, however, is processed in a second work environment.

The strict separation of the two work environments ensures a high level of security. Company and government networks are accessed using encrypted connections via mobile telephony, WLAN, or Ethernet.

All Advantages at a Glance

Secure connection of mobile employees

Two work environments on one laptop

Use of familiar standard applications

Secure VPN via mobile telephony, WLAN, Ethernet

VPN technology
"Made in Germany"

Reliable hard drive encryption

Administration via management station

Approved for classification levels German VS-NfD, NATO RESTRICTED, RESTREINT UE/EU RESTRICTED

vs-top has been approved by the German Federal Office for Information Security (BSI) as meeting the requirements of classification levels German VS-NfD, NATO RESTRICTED, and RESTREINT UE/EU RESTRICTED.

SecurITy
made in Germany

No Way Through for Attackers or Malicious Software

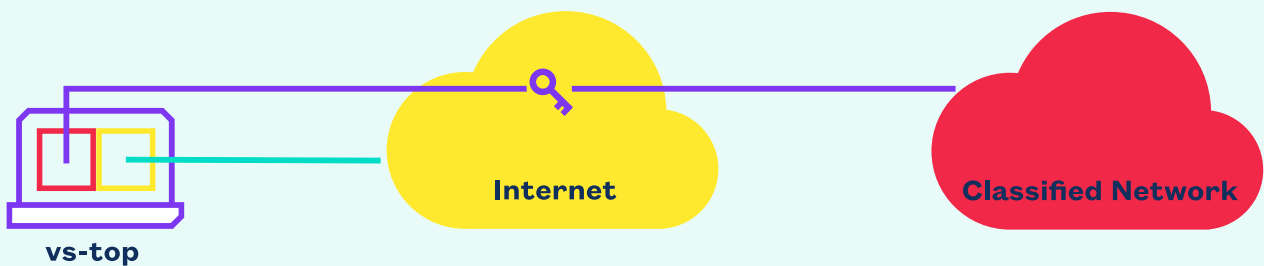

A separating system ensures strictly isolated compartments on your Security Laptop. One contains the browser, e-mail, and office applications, while the other is the work environment for confidential data, and a third for a VPN gateway and a firewall. Each compartment has its own independent operating system.

The systematic separation means that attackers or malicious software cannot break out from one working environment into the next or, worse, into the security systems. Your confidential data is also encrypted, so that access is only possible using a smart card and PIN.

Efficiency and Security with Central Administration

The security components on the vs-top are centrally administrated via the Central Management Station genucenter. This means that you can set up the desired configuration for all mobile users from a central location as well as modify it and install updates at any time, ensuring consistent implementation of your security policy.

As a result, your IT security strategy will be consistently implemented and you will be able to achieve a very high level of mobile security in a short amount of time.

Communication via strictly separated compartments

Reasons Why

- Experts for the IT security of companies and public organizations
- Offer of a comprehensive, modular IT security portfolio
- Quality without compromise for all products, services, and processes

genua – Excellence in Digital Security

genua develops innovative, reliable as well as market-shaping products and solutions. Whether in the public sector, for the operators of critical infrastructures, in industry or in the protection of classified information: we provide answers to the IT security challenges of today and of tomorrow.
